- a laminated body including a layer containing a light emitting substance over and in direct contact with the first electrode, a first layer containing a first substance of which a hole mobility is higher than an electron mobility and a second substance that can accept an electron from the first substance over and in direct contact with the laminated body, a second layer containing a third substance of which an electron mobility is higher than a hole mobility and a fourth substance that can donate an electron to the third substance over and in direct contact with the first layer, and a second electrode in direct contact with the second layer (claim 6).
